

SWE40006 – Software Deployment and Evolution

Deployment Portfolio Task 1

Daniel Johansson Tan (105075074)

Semester 2

Submission Date: 18 August 2026

Target Level: 1.4 (HD)

Contents

1.1	Sample App	3
1.2	(simple text processor).....	6
1.3	Adding DLLs	10
1.4	GitHub Release + WinGet.....	15

1.1 Sample App

For the first task I followed the instruction given in the assignment to download all the necessary software, like visual studio, Wix, etc; and building a simple Sample app to print out some sentences including “Hello World”

Code for SampleApp

```
1 using System;
2 using System.Collections.Generic;
3 using System.Linq;
4 using System.Text;
5 using System.Threading.Tasks;
6
7 namespace SampleApp
8 {
9     internal class Program
10     {
11         static void Main(string[] args)
12         {
13             Console.WriteLine("Deployment Activity 1: Pass Task Completed");
14             Console.WriteLine("Press any key to exit");
15             Console.WriteLine("Hello World");
16             Console.ReadKey();
17         }
18     }
19 }
20
```

Building SampleApp

```

Run the window installer

File in C Drive, Program files

Output

#instalation

1. go to SampleApp folder and there will be WixExample folder go in go to bin/release/ and then find the Window Installer or WixExample
2. click on it and wait for the download
3. go to C drive
4. find program files and then find WixExample
5. Run the Application

1.2 (simple text processor)

For Task 1.2 I made a simple text processor where the user can type in the words or sentences, they want and simply press the count words button and the software will count how many words has been typed into the text box.

Code (Program.cs)

```
1  using System;
2  using System.Windows.Forms;
3
4  namespace TextProcessor
5  {
6      0 references
7      static class Program
8      {
9          [STAThread]
10         0 references
11         static void Main()
12         {
13             Application.EnableVisualStyles();
14             Application.SetCompatibleTextRenderingDefault(false);
15             Application.Run(new Form1());
16         }
17     }
```

Code (Form1.cs)

```
Program.cs  Form1.cs  X
1.2
1  using System;
2  using System.Windows.Forms;
3
4  namespace TextProcessor
5  {
6      2 references
7      public class Form1 : Form
8      {
9          private TextBox inputBox;
10         private Label resultsLabel;
11
12         1 reference
13         public Form1()
14         {
15             Text = "Word Counter";
16             Width = 400;
17             Height = 300;
18
19             // Text input
20             inputBox = new TextBox();
21             inputBox.Multiline = true;
22             inputBox.Dock = DockStyle.Top;
23             inputBox.Height = 150;
24             inputBox.Text = "Paste your text here...";
25             Controls.Add(inputBox);
26
27             // Button to count
28             Button countBtn = new Button();
29             countBtn.Text = "Count Words";
30             countBtn.Width = 100;
31             countBtn.Top = 160;
32             countBtn.Click += CountBtn_Click;
33             Controls.Add(countBtn);
34
35             // Results label
36             resultsLabel = new Label();
37             resultsLabel.Top = 200;
38             resultsLabel.Left = 10;
39             resultsLabel.Width = 360;
40             resultsLabel.Height = 50;
41             resultsLabel.BorderStyle = BorderStyle.FixedSingle;
42             resultsLabel.Font = new System.Drawing.Font("Arial", 14);
43             Controls.Add(resultsLabel);
44         }
45     }
46 }
```

```
1 reference
44 private void CountBtn_Click(object sender, EventArgs e)
45 {
46     if (string.IsNullOrEmpty(inputBox.Text) || inputBox.Text == "Paste your text here...")
47     {
48         MessageBox.Show("Enter some text first!");
49         return;
50     }
51
52     int wordCount = inputBox.Text.Split(new[] { ' ', '\n', '\t' }, StringSplitOptions.RemoveEmptyEntries).Length;
53     resultsLabel.Text = "Word Count: " + wordCount;
54 }
55 }
56 }
```

Windows installer

App (file location in C drive, and app output)

1.3 Adding DLLs

I created 2 libraries for 1.3 using the code from Task 1.2 (TextProcessorLibrary and TextProcessorsUtils)

1. TextProcessorsLibrary

- Contains the WordCounter Class, which counts the number of words in the input text

```
Program.cs  Form1.cs  Form1.cs [Design]  Class1.cs

1.2
1  using System;
2  using System.Windows.Forms;
3  using TextProcessorLib;
4  using TextProcessorUtils;
5
6  namespace TextProcessor
7  {
8      2 references | 0 changes | 0 authors, 0 changes
9      public class Form1 : Form
10     {
11         private TextBox inputBox;
12         private Label resultsLabel;
13         private WordCounter wordCounter;
14         private TextValidator validator;
15
16         1 reference | 0 changes | 0 authors, 0 changes
17         public Form1()
18         {
19             wordCounter = new WordCounter();
20             validator = new TextValidator();
21             Text = "Word Counter";
22             Width = 400;
23             Height = 300;
24
25             // Text input
26             inputBox = new TextBox();
27             inputBox.Multiline = true;
28             inputBox.Dock = DockStyle.Top;
29             inputBox.Height = 150;
30             inputBox.Text = "Paste your text here...";
31             Controls.Add(inputBox);
32
33             // Button to count
34             Button countBtn = new Button();
35             countBtn.Text = "Count Words";
36             countBtn.Width = 100;
37             countBtn.Top = 160;
38             countBtn.Click += CountBtn_Click;
39             Controls.Add(countBtn);
40
41             // Results label
42             resultsLabel = new Label();
43             resultsLabel.Top = 200;
44             resultsLabel.Left = 10;
45             resultsLabel.Width = 360;
46             resultsLabel.Height = 50;
47             resultsLabel.BorderStyle = BorderStyle.FixedSingle;
48             resultsLabel.Font = new System.Drawing.Font("Arial", 14);
49             Controls.Add(resultsLabel);

Create YAML manifest for TextProcessor package

Add a description

Write Preview

Added a YAML manifest for the TextProcessor package, including metadata such as version, publisher, and installation details.

<!-- PR Title Format: "New package: Publisher.Name version X.Y.Z" or "Update: Publisher.Name to X.Y.Z" -->

Description

<!-- Describe what this PR changes. For manifest submissions, include the package name and version. -->

Checklist

<!-- Place an "x" between the brackets to check an item. e.g: [x] -->

- [] Signed the [Contributor License Agreement](https://cla.opensource.microsoft.com)
- [] Linked to an issue (if applicable)
- <!-- Example: Resolves #328283 -->
- Resolves #[] Issue Number]

Manifest Checklist

- [] Checked that there aren't other open [pull requests](https://github.com/microsoft/winget-pkgs/pulls) for the same manifest update/change
- [] This PR only modifies one (1) manifest
- [] Validated manifest locally with `winget validate --manifest <path>` ([validation guide](https://github.com/microsoft/winget-pkgs/blob/master/doc/ValidationFailureGuide.md))
- [] Tested manifest locally with `winget install --manifest <path>`
- [] Manifest conforms to the [1.12 schema](https://github.com/microsoft/winget-pkgs/tree/master/doc/manifest/schema/1.12.0)
